Program Details

Class Time:

8am—5pm

Class Size:

20 Students

Registration

For registration information please call our main office at (907) 563-4463 or e-mail LTRoffice@alaska.net

Please Bring

Closed toe shoes
Comfortable clothing
Clothing for conditions
Hat, gloves, boots, etc.
Water bottle
Towel
Personal lock

*Recognized by the FAA, this program meets or exceeds requirements for aviation safety training for both federal and state workers. Recognized by the State of Alaska for 16 hours of CME credit.

Aviation Land and Water Survival

This 16 hour program taught over 2 days is the most comprehensive training available for pilots and passengers who must fly for their jobs in Alaska. It is designed for the FAA, oilfield support, research personnel and frequent bush aviators

Program Overview

Students begin training by learning about crash positioning and quickly find themselves practicing these skills in a variety of crash simulators. These simulators include helicopter and fixed wing door escapes, blocked exit procedures, smoke escapes, simulated casualties and inversion. This same day students are given post-crash survival training at our field site to continue their hands-on experience. Day two of the course addresses the specific area of water ditching's and techniques for survival. This classroom and workshop training is followed by four hours of dunker training at a local pool.

Post Crash Survival

The field training portion of the course is specific to the conditions found in both summer and winter in Alaska. Students receive hands-on experience in wilderness first-aid, risk assessment, patient movement, improvising emergency clothing, building fires, and even tasting aircraft survival rations. The afternoon ends with the students using signaling devices, such as radios, beacons, signal lasers and flares.

Pool Training

The pool session is where the most intense training occurs. Students practice submerged escapes from two person crash simulators replicating both side and frontal impacts. Practical exercises include releasing belts, functioning of push out windows, rotating door handles, and penetration of underwater barriers while submerged. Additional hands-on training is provided in the use of life jackets, survival swimming life rafts boarding and USCG helicopter rescue devices.
