Program Details

Class Time:

8am—5pm

Class Size:

20 Students

Registration

For registration information please call our main office at (907) 563-4463 or e-mail LTRoffice@alaska.net

Issued Equipment

Please Bring

- Closed toe shoes
- Comfortable clothing
- Personal lock
- Towel

Recognized by the State of Alaska for 8 hours of EMS - CME credit.

Helicopter Underwater Egress Training

This 8-hour program is the most comprehensive training available for pilots and passengers who must fly overwater for their jobs in Alaska. It is designed for the FAA, EMS, oilfield support, research personnel and frequent over water aviators

Program Overview

The program is designed to prepare individuals for an over water emergency, combining military and civilian water egress techniques with personalized water egress training. Emphasis is placed on learning to stay oriented after submersion and to follow a pattern of simple steps to egress a helicopter. Students learn and actively perform skills in a pool environment, guided by instructors, using two different portable airframe escape trainers as well as life rafts, PFDs and equipment found in aviation emergencies.

Classroom & Lab Training

Classroom training focuses on understanding aircraft emergencies, risk assessment, decision making, aircraft ditching techniques, and post-crash sea survival. In addition, students are instructed on crash positions, aircraft restraint systems, aviation PFDs, aircraft life-support equipment, and egress steps for escaping both surface and submerged airframes. Students practice these techniques in both large and small dry egress trainers at the LTR facility

Pool Training

The pool session is where the most intense training occurs. Students practice submerged escapes from two person crash simulators replicating both side and frontal impacts. Practical exercises include releasing belts, functioning of push out windows, rotating door handles, and penetration of underwater barriers while submerged. Additional hands-on training is provided in the use of life jackets, survival swimming life rafts boarding and USCG helicopter rescue devices.
